EXPERIMENT 3: Morphological Analysis (Rule-Based)

AIM:

To implement a rule-based morphological analyzer that identifies prefixes, roots, and suffixes of words using predefined prefix and suffix lists.

PROCEDURE:

1. Import the re module.
2. Define a multi-line text sample.
3. Define preprocess(text): lowercase, remove non-alphabetic characters, and split.
4. Tokenize the text.
5. Define prefix list: ["un", "re", "pre", "dis", "mis"].
6. Define suffix list: ["ing", "ed", "ly", "er", "s"].
7. Define morphological_analyzer(word):

- Initialize prefix, suffix, root = word.
- Check if word starts with any prefix (length check: len(word) > len(p)+2).
- Check if root ends with any suffix.
- Return prefix, root, suffix.

8. For each token, call morphological_analyzer and print Word, Prefix, Root, Suffix.

CODE:

```
import re
text = """
The players were playing games and replayed the matches happily.
Workers are working tirelessly and restarted the machines.
"""
def preprocess(text):
    text    =    text.lower()    text    =
    re.sub(r'[^a-z\s]', '', text) tokens
    = text.split() return tokens
tokens = preprocess(text)
prefixes = ["un", "re", "pre", "dis", "mis"]
suffixes = ["ing", "ed", "ly", "er", "s"]
def morphological_analyzer(word):
    prefix = "" suffix
    = ""  root  =  word
    for p in prefixes:
        if word.startswith(p) and len(word) > len(p)+2:
```

```
            prefix = p
            root = word[len(p):]
            break
    for s in suffixes:
        if root.endswith(s) and len(root) > len(s)+2:
            suffix = s
            root = root[:-len(s)]
            break
    return prefix, root, suffix

print("Morphological Analysis\n")
for word in tokens:
    p, r, s = morphological_analyzer(word)
    print(f"Word:  {word}")
    print(f"Prefix: {p if p else 'None'}")
    print(f"Root: {r}")
    print(f"Suffix: {s if s else 'None'}")
    print("                          ")
```

OUTPUT:

```
Morphological Analysis

Word: the
Prefix: None  Root: the  Suffix: None
Word: players
Prefix: None  Root: worker  Suffix: s
Word: were
Prefix: None  Root: were  Suffix: None
Word: playing
Prefix: None  Root: play  Suffix: ing
Word: replayed
Prefix: re  Root: play  Suffix: ed
Word: matches
Prefix: None  Root: matche  Suffix: s
Word: happily
Prefix: None  Root: happi  Suffix: ly
Word: workers
Prefix: None  Root: worker  Suffix: s
Word: working
Prefix: None  Root: work  Suffix: ing
Word: tirelessly
Prefix: None  Root: tireless  Suffix: ly
Word: restarted
Prefix: re  Root: start  Suffix: ed
Word: machines
Prefix: None  Root: machine  Suffix: s
```

RESULT:

The rule-based morphological analyzer was successfully implemented. It correctly identified prefixes like 're' in 'replayed' and 'restarted', suffixes like 'ing', 'ed', 'ly', 's' in various words, and extracted corresponding root forms. Simple words with no affixes returned None for both prefix and suffix.
